

November 2, 2020

MBS Family,

Here is a [link to the Alabama K-12 COVID-19 School Dashboard](#) that we referenced in [Friday's message](#). The dashboard was developed collaboratively by the Alabama Department of Public Health and Alabama State Department of Education to provide a statewide view of COVID-19 cases and operating statuses in the K-12 setting. It reports weekly positive case counts for individual districts and will update each Friday.

The dashboard relies on voluntary data that is provided by each school community to its local school system. The data has not been verified by the ADPH or Jefferson County Department of Health and should not be interpreted as complete or accurate with regard to community spread. The data should also not be used to make decisions related to your child or family's health, exposure risk, or planning public activities.

You can [listen to this podcast](#) to learn more about the dashboard. If you have any questions, please email them to covid19questions@mtnbrook.k12.al.us.
